Information Technology Asset Disposal (ITAD)

INNOVATIVE APPROACH

About Us

IT remarketing and data security specialists

Bespoke solutions

Fully Compliant

IT Asset disposition is the term used to cover services required at the end of an IT asset's lifecycle. With the constant evolution of technology driving businesses to have a heavy replacement cycle, enterprises with old equipment are faced regularly with decisions of whether to refurbish or resell, recycle or dispose, and in need of an economical, secure, and environmental solution to the question of what to do with these obsolete IT assets.

Kaizen specialise in the process of streamlining the disposition of IT assets. By following the company ethos, and ensuring that we are always Innovative Towards Asset Disposition (ITAD), Kaizen can offer bespoke solutions tailored to your business' requirements, at any point along the ITAD process.

Lower Risk ✔
Higher Return ✔
GDPR Compliance ✔

Information Technology Asset Disposal (ITAD)

With Kaizen you can be assured of the secure, compliant, disposal of your IT equipment along with market leading financial returns on all re-usable items

As part of Kaizen's ITAD process you will receive:

- Site Visit if required

- Quotation of likely value of equipment or upfront purchase price depending on approach determined

- Secure, convenient collection using own staff and vehicles

- Fully assessed within 5 working days resulting in purchase order (where appropriate)

- All data destroyed using BLANCCO and certificates provided

- Any non re-usable equipment recycled responsibly

- Adherance to Waste Management Hierarchy and all industry regulations

- Access to Customer Portal to review progress

- Full reporting and certification at end of project

- Prompt payment for any equipment purchased / marketed

Additional Services

- Redeployment - upgrade your hardware and softtware
- Microsoft Reseller - subscription based microsoft office productivity software and tools
- Cyber Security, Data Security and Back-Up Solutions

Data Security Services

REASSURANCE ASSURED

Data Security has never been more important to companies and their customers. The introduction of the General Data Protection Regulations on 25 May 2018 and the increasing occurrences of data breaches and theft means that protecting confidential information is one of the highest priorities for all companies.

Whether it is live information, or information at the end of it's life Kaizen provide a breadth of services to help you retain data security during your data's lifecycle

Whilst most companies have procedures in place to protect their data in-house and online, what about when it is time to dispose of the equipment and media containing that data? At Kaizen, we understand how crucial data confidentiality and security is and can ensure the secure destruction of all data held on any equipment or media.

With stronger regulations now in place, organisations can be fined up to 20 Million Euros or 4% of their annual global turnover for non-compliance or a data breach.

Data Security Services

Kaizen provide a range of government approved, secure data protection services to give you peace of mind and ensure you do not breach the GDPR.

Data Wiping

Kaizen use Blancco Data Erasure tools to guarantee that all data has been permanently removed. Blancco's overwriting technology meets the most stringent of international standards including those used by the UK and US military authorities.

- Completely removes all data on targeted storage devices using proven, customisable overwriting procedures
- Data can be erased from all media types including Hard Drives, Solid State Drives, Mobile Phones, Tablets, USB Drives, Server arrays, LUNs etc.
- Approved by GCHQ's National Cyber Security Council to the highest HMG Infosec Standards
- Analytical reports for each data device wiped are provided.

Degaussing

Kaizen offer a convenient, end-of-lifecycle service - the complete destruction of your data using a degausser, a hardware device that destroys data using strong magnetic fields. This method of data destruction is compliant to the CESG lower level of compliance.

Shredding

Kaizen provide many shredding options to physically destroy data storing devices such as hard disc drives. The shredding of data storage devices involves a process of grinding and cutting into small particles. Further passes through a shredder can reduce the particles to less than 5mm, the MOD standard, of which data can no longer be recovered.

In addition to data destruction services, Kaizen also provide data recovery and storage solutions

IT Recycling Services

THINK GLOBAL - IT DISPOSAL

About Us

IT remarketing and data security specialists

Bespoke solutions

Fully Compliant

"The greatest threat to our planet is the belief that someone else will save it." - Robert Swan

When it comes to the disposition of obsolete IT assets, adherence to the waste management hierarchy is a priority here at Kaizen. With the speed in which organisations use and replace IT equipment it is highly important to minimise the impact of this on the environment.

Through looking to reuse and remarket before recycling, we not only prevent unnecessary waste but also maximise returns on 'end of life' assets.

Avoid	Maximum Conservation of Resources
Reuse	Reusing Materials
Recycle	Recycling & Reprocessing of Materials
Waste to energy	Energy Recovery Prior to Disposal
Disposal of waste	Zero Conservation of Resources

However, there are times when IT equipment is not viable for reuse and hence must be recycled.

When this happens Kaizen's Recycling Process is fully licenced by the Environment Agency to ensure full compliance with the WEEE* Directive

Fully Traceable ✔
WEEE Compliant ✔
Zero Landfill ✔

*Waste Electrical and Electronic Equipment

IT Recycling Services

Kaizen's IT Reycling Process

- Identify IT Disposal requirement via list, photos, or site visit

- Estimate re-use / remarketing potential of assets and value of return to customer

- Identify and agree any data security services

- Identify any hazardous waste items that may incur disposal charges, such as CRT monitors, large batteries etc

- Provide proposal to customer including quotation of returns vs cost, scheduled date, any operational information, or access requirements

- Agree collection date and time

- Kaizen, using own vehicles and trained staff, will collect all equipment and provide all appropriate paperwork e.g. Waste Transfer Note, Collection Note

- Upon receipt to Kaizen's secure operation, items will be seperated for reuse / remarketing, and recycling

- Reuse Items are passed for refurbishment and a purchase order provided to customer for residual value (minus any agreed costs for hazardous items / data security services if applicable)

- All recycling items are separated according to their waste / material categories

- Each waste category is processed by fully accredited recycling centres to ensure maximum reclaimation value and environmental compliance.

- All data bearing items are securely wiped or destroyed according to the appropriate security level of the customer and certification provided as required.

- All relevant paperwork provided to customer including completed waste documentation, data destruction certificates, purchase order, to ensure compliance to both the WEEE Directive and also the General Data Protection Regulations (GDPR)

In addition to recycling services, Kaizen also provide ITAD and data security services and solutions

Redeployment Services

REVITALISE YOUR IT

About Us

IT remarketing and data security specialists

Bespoke solutions

Fully Compliant

IT assets play a crucial role in pretty much every part of an organisation, and being some of the most valuable assets within a business it can end up proving very costly to refresh an IT suite. Keeping these assets within the organisation through redeployment can save both money and time, whilst keeping productivity levels high.

IT redeployment means the refurbishment and re-deployment of IT assets within a company. This means that companies can benefit from updated, refreshed and refurbished laptops and PCs that work as well as new equipment without the far higher cost of new assets.

The benefits of IT redeployment are many, from the environmentalaspect, to cost of purchase, to reduced training required by using re-deployed IT assets. IT redeployment means that fewer IT assets result in being disposed of, leading to less e-waste.

Lower Cost ✓
Improved Performance ✓
GDPR Compliant ✓
Less Training ✓

Redeployment Services

In addition to upgrading to the latest operating system and software, laptops and PCs can be professionally refurbished and re-packaged so that they can be redeployed to other areas of the business where the highest spec equipment is not as necessary, at far lower cost than new. Our cascading redeployment service demonstrates how this can be made possible within an organisation.

Organisation procures equipment for 'Tier A' of the organisation.

Tier A
Employees requiring the highest-spec equipment.

Tier B
Employees requiring good spec equipment.

Kaizen refresh, repackage, and redeploy

Tier C
Employees requiring less spec equipment than the above tier.

Tier D

As a Microsoft Registered Refurbisher and Partner, the refurbishment and re-packaging quality will ensure your employees do not feel devalued by their 'new' refurbished laptop or PC.

Re-deployment services can be used for employee purchase schemes should you wish to make your surplus or redundant IT equipment available to employees. Kaizen can provide certified data destruction and re-imaging of your equipment to protect your data security whilst restoring or upgrading all relevant software for your employee's personal use.

Kaizen Re-deployment Services;

- Upgrading Operating Systems (Win10 / Server 2019 etc)
- Installing software & subscriptions (Office 365 etc)
- Certified Data Destruction
- Re-Imaging desktops
- Hardware upgrades (RAM, HDD, SSD, Graphics etc)
- Cleaning and re-packaging
- Employee Purchase Programs
